

2014 GLOBAL FINDEX METHODOLOGY

SURVEY METHODOLOGY

The indicators in the 2014 Global Financial Inclusion (Global Findex) database are drawn from survey data covering almost 150,000 people in 143 economies—representing more than 97 percent of the world’s population (see table 1 for a list of the economies included). The survey was carried out over the 2014 calendar year by Gallup, Inc. as part of its Gallup World Poll, which since 2005 has continually conducted surveys of approximately 1,000 people in each of more than 160 economies and in over 140 languages, using randomly selected, nationally representative samples. The target population is the entire civilian, noninstitutionalized population age 15 and above. For a summary of the data and key findings, see “The Global Findex Database 2014: Measuring Financial Inclusion around the World” by Asli Demirguc-Kunt and others.¹

INTERVIEW PROCEDURE

Surveys are conducted face to face in economies where telephone coverage represents less than 80 percent of the population or is the customary methodology. In most economies the fieldwork is completed in two to four weeks. In economies where face-to-face surveys are conducted, the first stage of sampling is the identification of primary sampling units. These units are stratified by population size, geography, or both, and clustering is achieved through one or more stages of sampling. Where population information is available, sample selection is based on probabilities proportional to population size; otherwise, simple random sampling is used. Random route procedures are used to select sampled households. Unless an outright refusal occurs, interviewers make up to three attempts to survey the sampled household. To increase the probability of contact and completion, attempts are made at different times of the day and, where possible, on different days. If an interview cannot be obtained at the initial sampled household, a simple substitution method is used. Respondents are randomly selected within the selected households by means of the Kish grid.² In economies where cultural restrictions dictate gender matching, respondents are randomly selected through the Kish grid from among all eligible adults of the interviewer’s gender.

In economies where telephone interviewing is employed, random digit dialing or a nationally representative list of phone numbers is used. In most economies where cell phone penetration is high, a dual sampling frame is used. Random selection of respondents is achieved by using either the latest birthday or Kish grid method. At least three attempts are made to reach a person in each household, spread over different days and times of day.

DATA PREPARATION

Data weighting is used to ensure a nationally representative sample for each economy. Final weights consist of the base sampling weight, which corrects for unequal probability of selection based on household size, and the poststratification weight, which corrects for sampling and nonresponse error. Poststratification weights use economy-level population statistics on gender and age and, where reliable data are available, education or socioeconomic status.

Table 2 shows the data collection period, number of interviews, approximate design effect, and margin of error as well as sampling details for each economy.

Additional information about the Global Findex data, including the complete database, can be found at <http://www.worldbank.org/globalfindex>.

Additional information about the methodology used in the Gallup World Poll can be found at <http://www.gallup.com/178667/gallup-world-poll-work.aspx>

1. The reference citation for the 2014 Global Findex data is Asli Demirguc-Kunt, Leora Klapper, Dorothe Singer, and Peter Van Oudheusden, "The Global Findex Database 2014: Measuring Financial Inclusion around the World" (Policy Research Working Paper 7255, World Bank, Washington, DC, 2015).
2. The Kish grid is a table of numbers used to select the interviewee. First, the interviewer lists the name, gender, and age of all permanent household members age 15 and above, whether or not they are present, in order by age. Second, the interviewer finds the column number of the Kish grid that corresponds to the last digit of the questionnaire and the row number for the number of eligible household members. The number in the cell where the column and row intersect is the person selected for the interview.

Switzerland	OEC	High	Apr 11–May 5	1,008	1.50	3.8	Landline and cellular telephone	French, German, Italian	
Taiwan, China	n.a.	High	Apr 28–Jun 14	1,000	1.42	3.7	Landline and cellular telephone	Chinese	
Tajikistan	ECA	Low	Aug 1–Aug 30	1,000	1.27	3.5	Face to face	Tajik, Russian	
Tanzania	SSA	Low	Jul 6–Jul 22	1,008	1.48	3.7	Face to face ^d	Swahili, Kishwahili	
Thailand	EAP	Upper middle	Aug 21–Oct 2	1,000	1.44	3.7	Face to face	Thai	
Togo	SSA	Low	Jun 15–Jun 24	1,000	1.38	3.6	Face to face ^d	Ewe, French, Kabye	
Tunisia ^e	n.a.	Upper middle	Sep 9–Sep 19	1,056	1.11	3.2	Face to face	Arabic	
Turkey	ECA	Upper middle	May 16–Jun 24	1,002	1.46	3.7	Landline and cellular telephone	Turkish	
Turkmenistan	ECA	Upper middle	Jul 10–Jul 26	1,000	1.21	3.4	Face to face	Russian, Turkmen	
Uganda	SSA	Low	Jun 9–Jun 21	1,000	1.40	3.7	Face to face ^d	Ateso, English, Luganda, Runyankole	
Ukraine	ECA	Lower middle	Sep 11–Oct 17	1,000	1.49	3.8	Face to face	Russian, Ukrainian	Sample excludes Crimea starting in 2014. Also excluded are settlements in the Donetsk and Lugansk oblasts of the East region, resulting in the exclusion of approximately 10% of the total population (and approximately 30% of the population of the East region).
United Arab Emirates ^e	n.a.	High	May 21–Jun 26	1,002	1.37	3.6	Landline and cellular telephone	Arabic, English	Sample includes only Emiratis, Arab expatriates, and non-Arabs who were able to participate in the survey in Arabic or English.
United Kingdom	OEC	High	Apr 14–May 27	1,000	1.62	4.0	Landline and cellular telephone	English	

2014 GLOBAL FINDEX METHODOLOGY

TABLE 2 Details of survey methodology for economies included in the 2014 Global Findex survey and database

Economy	Region ^a	Income group	Data collection period	Interviews	Design effect ^b	Margin of error ^c	Mode of interviewing	Languages	Exclusions and other sampling details
United States	OECD	High	May 14–Jun 8	1,021	1.70	4.0	Landline and cellular telephone	English, Spanish	
Uruguay	n.a.	High	Sep 12–Nov 5	1,000	1.27	3.5	Face to face ^d	Spanish	
Uzbekistan	ECA	Lower middle	Jul 13–Aug 9	1,000	1.36	3.6	Face to face ^d	Russian, Uzbek	
Venezuela, RB	LAC	Upper middle	Nov 23–Dec 23	1,000	1.60	3.9	Face to face ^d	Spanish	
Vietnam	EAP	Lower middle	Nov 25–Dec 23	1,000	1.29	3.5	Face to face	Vietnamese	Sample excludes the provinces of An Giang, Dak Lak, Ha Tinh, Kien Giang, Quang Binh, and Thanh Hoa. The excluded areas represent approximately 12% of the population.
West Bank and Gaza	MDE	Lower middle	May 15–Jun 14	1,000	1.61	3.9	Face to face	Arabic	Sample includes East Jerusalem.
Yemen, Rep.	MDE	Lower middle	May 30–Jun 12	1,000	1.46	3.7	Face to face	Arabic	Gender-matched sampling was used during the final stage of selection.
Zambia	SSA	Lower middle	Dec 7–Dec 31	1,000	1.54	3.8	Face to face ^d	Bemba, English, Lozi, Nyanja, Tonga	
Zimbabwe	SSA	Low	Jun 3–Jul 29	1,000	1.43	3.7	Face to face ^d	English, Ndebele, Shona	

Source: Data on survey methodology provided by Gallup, Inc. For more details, see <http://www.gallup.com/178667/gallup-world-poll-work.aspx>

n.a. = not applicable.

- Regions exclude high-income non-OECD economies. EAP = East Asia and the Pacific; ECA = Europe and Central Asia; LAC = Latin America and the Caribbean; MDE = Middle East; OECD = high-income OECD economies; SAS = South Asia; SSA = Sub-Saharan Africa.
- The design effect calculation reflects the weights and does not incorporate the intraclass correlation coefficients because they vary by question. Design effect calculation: $n \times (\text{sum of squared weights}) / ((\text{sum of weights}) \times (\text{sum of weights}))$.
- The margin of error is calculated around a proportion at the 95 percent confidence level. The maximum margin of error was calculated assuming a reported percentage of 50 percent and takes into account the design effect. Margin of error calculation: $\sqrt{(0.25/N) \times 1.96^2 \times (DE)}$. Other errors that can affect survey validity include measurement error associated with the questionnaire, such as translation issues, and coverage error, where a part of the target population has a zero probability of being selected for the survey.
- Interviewers used a handheld device (computer-assisted personal interviewing, or CAPI) during the interviews rather than pen and paper.
- Economy excluded from regional and global aggregates because of the sampling or data collection methodology used.
- Areas with oversampling represent a disproportionately large number of interviews in the sample.
